fiery comets and the burning meteors all of these things in the sky are so easily ours to look at to enjoy and to use that we are apt not to take them at their true value just as many of us do not appreciate to the fullest the green grass the trees the birds and all the other good things we have without price you may wonder how you can make any use of the stars but there are dozens of ways by which they will serve your purpose from finding the north to lighting a fire and from telling the time to sending a signal and they are all easy to you when you know how all the apparatus you need so that you can know the stars is a pair of good sharp eyes and if you are fitted with these you are ready to begin your work in starcraft this very night about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

the little book of stars tells the story of stellar science and what the stars mean to us from a variety of perspectives beginning with the big picture the book moves through progressively more and more intimate views until we feel we can hold the stars in our hands from which we can then throw them back to the sky to see our place among them the book opens with a summary of the event that created our universe the big bang and then goes on to describe the natures of the big bang's progeny the stars what they are how they shine and how they can live such immensely long lives approaching horne it next examines the measures of the stars where they are how they are collected together from pairs to galaxies of billions and how we learn of their individual properties yet closer we look in depth at the sun and at the physical differences among the stars at the immense range of properties they possess finally arriving at earth we see the significance of the stars to human life how we have used them to tell our stories and to find where we are in both space and time v from this base the book looks more closely at stellar details concentrating on temporal phenomena on stellar change and on the observational base that helps set the stage for the theory that links them all together
